

After reviewing available material, I too support fully the well founded Comment submitted by The American Radio Relay League concerning Docket ET 03-104. This issue is of critical importance for the continued use of the HF spectrum. I conclude the comments made by proponents of Broadband over Power Line (BPL) have little if any credible scientific data to support approval of this docket at this time. Further research and innovations in BPL will be needed to avoid the great risk this innovative technology will not cause irreparable interference to services licensed to operate in the 2 MHz - 80 MHz frequency range. It has the potential to effectively render these frequencies useless. Approval of ET 03-104 would violate the existing FCC rules on non-interference and would be contrary to the best interest of the public. BPL, in its current state, cannot coexist with existing radio services in this frequency range.

I thank you for your time.

Sincerely,

-Bill Reed
